

shell immersion center

Shell already knew we were capable of “doing the impossible”. We proved this again by designing, fabricating and installing a unique audio visual learning environment for Shell traders—*from concept to live in less than 90 days*. The result is an effective, inviting facility that ensures proper training on Shell’s new software, using proven educational formats.

- Sleek kiosks and directional sound system synchronized for continuous presentation flow
- Inviting, contemporary design through use of natural light and strategic accent lighting
- High-tech environment with touch screen overlays on 50” LED monitors; HD projection
- Interfaced with Shell software design teams, real estate division, and the city of Houston
- Managed all aspects of the construction and installation, ensuring on-time and on-budget delivery
